****PLEASE READ BEFORE ASSEMBLING CART****

Included in your shipment are 8 silver connectors. They are used to attach the handles to the cart base, as well as connecting the extension bar to the handles when you're using them on the wider side. On 4 of those connectors, 1 pin is missing. This is to make it easier for you to remove the handles when storing and transporting. You want to make sure that when you're inserting the connectors into the cart base, you put the side missing the pin facing down, so that it doesn't lock into the base. We have found this to be very sturdy and feel that the pin is unnecessary. In case you decide you would like to use them, we have included those pins separately in a plastic bag. You would just need insert them back in.
